The model regions funded

**eTelligence (model region of Cuxhaven)**
Dr. Wolfram Krause, EWE Aktiengesellschaft
Abteilung Forschung und Entwicklung (FE)
Tirpitzstraße 39, 26122 Oldenburg
E-mail: info@etelligence.de
www.etelligence.de

**E-DeMa (model region of Rhein-Ruhr)**
Prof. Dr. Michael Laskowski, RWE Energy AG
Rheinlanddamm 24, 44139 Dortmund
E-mail: michael.laskowski@rwe.com
www.e-dema.com

**MEREGIO (model region of Baden-Württemberg)**
Hellmuth Frey, EnBW Energie Baden-Württemberg AG
Durlacher Allee 93, 76131 Karlsruhe
E-mail: h.frey@enbw.com
www.e-energy.de/de/meregio.php

**Model city of Mannheim (model region of Rhein-Neckar)**
Andreas Kießling, MVV Energie AG
Technologie & Innovation
Luisenring 49, 68159 Mannheim
E-mail: a.kiessling@mvv.de
www.modelstadt-mannheim.de

**RegModHarz (regenerative model region of Harz)**
Regionale Kontaktstelle RegModHarz
Kirchplatz 24a, 38836 Dardesheim
E-mail: info@regmodharz.de
www.regmodharz.de

**Smart Watts (model region of Aachen)**
André Quadt, utilicount GmbH & Co. KG
Grüner Weg 1, 52070 Aachen
E-mail: a.quadt@utilicount.com
www.smartwatts.de

Concomitant research by order of the BMWi (German Federal Ministry of Economics and Technology)

**Overall management and coordination**
Ludwig Karg, B.A.U.M. Consult GmbH
Gotzheimer Str. 48/50, 81371 München
E-mail: e-energy@baumgroup.de

**Knowledge management and evaluation**
Dr. Thomas Hagen, incowia GmbH
Albert-Einstein-Str. 3, 98693 Ilmenau
E-mail: e-energy@incowia.com

**Documentation and transfer**
Jan Liepold, LoeschHundLiepold Kommunikation GmbH
Lindwurmstraße 124, 80337 München
E-mail: e-energy@lhlk.de

**Scientific consultancy**
Prof. Dr. Thomas Hartkopf, Technische Universität Darmstadt, Institut für Elektrische Energiesysteme, Fachgebiet Regenerative Energien
Landgraf-Georg-Str. 4, 64283 Darmstadt

Prof. Dr. Manfred Broy, Technische Universität München
Lehrstuhl für Software & Systems Engineering
Boltzmannstr. 3, 85748 Garching bei München

**Publishing details**

**Publisher**
Bundesministerium für Wirtschaft und Technologie
Referat Öffentlichkeitsarbeit
10115 Berlin
www.bmwi.de

**Design and production**
LoeschHundLiepold Kommunikation GmbH, München

**Photos**
Fotolia (title)

**Printing**
Müllerdruck GmbH & Co., KG, Mannheim

**Status**
April 2009

E-Energy
Paving the Way towards an Internet of Energy

www.e-energy.de
E-Energy is an integrated economic and innovative energy and climate programme.

Its objectives are:

- **To contribute to solving energy and climate problems** through the transition to smart generation – smart grid – smart consumption – smart storage
- **To create new jobs and open up new markets** through the digital organisation of technical operating and business processes
- **To speed innovative progress** by creating multidisciplinary structures
- **E-Energy constitutes a paradigm shift in the electricity industry**
  With future electricity systems, which will be significantly more focused on weather-dependent energy sources such as solar and wind power than today’s systems, it will not be possible to uphold the currently prevailing unidirectional paradigm of “consumer-oriented electricity generation”. This is why ICT solutions for a bidirectional system are to be created in the E-Energy model regions. In these solutions, “generation-oriented consumption” will be implemented for the first time alongside “consumer-oriented generation” in practical application.

E-Energy is a launch pad for electromobility

With its new ICT solutions, E-Energy lays the basis for the intelligent integration of electric vehicles in the overall power supply systems of the future.

With electric vehicles, the precise time at which the battery is charged is irrelevant. The important thing is that it has been charged by the time the vehicle is next used. Electric cars can register their current position, how much energy the battery still has and at what time it must be charged to a specific level, via the energy internet. And if the car is not in use, the battery can be used to buffer energy to compensate for the irregular availability of renewable energies.

E-Energy is a key tool for the modernisation of the electricity sector

With the aim of stepping up and intensifying the necessary R&D work, the BMWi has initiated the E-Energy technology programme, which will run for a 4-year term and receive an overall budget of some €140 million. Example solutions for an energy internet will be set up in six model regions for the first time. It is hoped that the solutions will quickly have a sweeping bandwagon effect and trigger follow-up investments. The aim here is to create a smart electricity system, which will extensively control itself and in which all energy-sector processes are optimally adapted to one another.

E-Energy combines all energy-sector processes in a single intelligent real time-interaction system.

“...the efficiency of power grids in Germany is to be enhanced through the use of modern information technologies and the integration of electric vehicles”
*(Key point, National Electromobility Development Plan)*
